

Integrator

Connect anything. Master everything.

Simple Configuration

- Simple selection of source/destination targets
- Graphically map master data between systems

Flexible Execution

- On-demand or scheduled batch execution
- Real-time execution with Event Management

Built-in Intelligence

- Trigger merges in source systems to dedupe data
- Automatic translation of system identities

Extensibility

- Out-of-the-box connectors for common systems
- Open framework, create your own connectors

Two complex problems. One elegant solution.

- 1 Easily create real-time bi-directional integrations to synchronize your master data with any enterprise system.
- 2 Support federated MDM, allowing local extension of centrally defined master data.

Integrator solves both problems with no code required, minimizing complexity and cost.

Accelerate your MDM implementation by using Integrator to easily integrate MDM with your business systems, delivering increased value via improved data quality and processes.

Integrator enables codeless integration of master data between the Profisee platform and your enterprise systems and external data service providers. With simple configuration and execution, integrate master data in either batch or real-time. Use pre-built connectors or build your own application or data service connector using Integrator's pluggable connector framework.

Built-in support for merging of duplicates makes it easy to clean up redundant data across your information landscape. Integrator makes it easier than ever to deliver a single view of your master data.

For global organizations, use Integrator to integrate multiple Profisee applications to distribute centrally maintained master data to local applications for regional extension, providing a federated MDM architecture.

Integrator makes complex MDM integrations faster and easier.

The Fastest Growing and #1 Time-To-Value MDM Platform
